Mercury FourStroke outboard motors are incredibly powerful and efficient, and they feature a wide range of applications. Crafted for less weight and high displacement, they generate abundant torque and immediate power. And because they don't have to work as hard as heavier engines or those with lower displacement, they make boats plane faster and accelerate better, and they provide optimal fuel efficiency at cruising speed.

FourStroke 75-150hp | Mercury Marine

Mercury 150 Four-Stroke Outboard Review. The Mercury 150 Four-Stroke outboard has become an exceptionally popular motor. Let's find out why. By Lenny Rudow. May 8, 2017. The Mercury 150 Four-Stroke outboard was introduced in 2011, to much fanfare. The idea was to create a mid-range four-stroke engine that offered the reliability, fuel economy, and ease of use of a modern four-stroke, but at a much lower price-point than the Verado line could meet.

Mercury Builds the Ultimate 150 Four Stroke

When choosing 4 stroke outboards – depending on the horsepower range you need for your craft – one of the decisions you'll need to make is whether you want an electronic fuel-injected (EFI) engine or a standard, carbureted 4 stroke. From the Start. First, when it comes to starting 4 stroke outboards, an EFI engine has the advantage.

EFI vs. a Standard 4 Stroke Outboards

The Mercury 150hp is the four-stroke of choice in the repower market for boats in the 5.5 – 6.0m size range, and it delivers equally well when coupled with new boats in a range of sizes and applications. It's a versatile outboard, and one that has now earned its stripes and accolades.

FIELD & STREAM, America's largest outdoor sports magazine, celebrates the outdoor experience with great stories, compelling photography, and sound advice while honoring the traditions hunters and fishermen have passed down for generations.

There are hundreds of large surface water bodies used to store drinking water supplies located throughout the United States and Canada. Some of these water bodies are already prime recreational attractions with strong economic and quality-of-life impacts upon their communities. Operational and boating management options can significantly reduce the levels of MTBE and other fuel-related contaminants. This report comprehensively evaluates these options to give practical data and advice to water managers who wish to consider the benefits of dual use without introducing unacceptable health risks into the water bodies being managed. RESEARCH PARTNERS * California Department of Health Services * Contra Costa Water District Originally published by AwwaRF for its subscribers in 2003
