A comprehensive introduction to machine learning that uses probabilistic models and inference as a unifying approach. Today's Web-enabled deluge of electronic data calls for automated methods of data analysis. Machine learning provides these, developing methods that can automatically detect patterns in data and then use the uncovered patterns to predict future data. This textbook offers a comprehensive and self-contained introduction to

the field of machine learning, based on a unified, probabilistic approach. The coverage combines breadth and depth, offering necessary background material on such topics as probability, optimization, and linear algebra as well as discussion of recent developments in the field, including conditional random fields, L1 regularization, and deep learning. The book is written in an informal, accessible style, complete with pseudo-code for the most important algorithms. All topics are copiously illustrated with color images and worked examples drawn from such application domains as biology, text processing, computer vision, and robotics. Rather than providing a cookbook of different heuristic methods, the book stresses a principled model-based approach, often using the language of graphical

Almost all the models described have been implemented in a MATLAB software package—PMTK (probabilistic modeling toolkit)—that is freely available online. The book is suitable for upper-level undergraduates with an introductory-level college math background and beginning graduate students.

Escobar—the subject of the hit Netflix series, *Narcos*. Colombian drug lord Pablo Escobar's brutal Medellín Cartel was responsible for trafficking tons of cocaine to North America and Europe in the 1980s and '90s. The nation became a warzone as his sicarios mercilessly murdered thousands of people—competitors, police, and civilians—to ensure he remained Colombia's reigning kingpin. With billions in personal income, Pablo Escobar bought off politicians and lawmen, and became a hero to poorer communities by building houses and sports centers. He was nearly untouchable despite the efforts of the Colombian National Police to bring him to justice. But Escobar was also one of America's most wanted, and the Drug Enforcement Administration was determined to see

him pay for his crimes. Agents Steve Murphy and Javier F. Peña were assigned to the Bloque de Búsqueda, the joint Colombian-U.S. taskforce created to end Escobar ' s reign of terror. For eighteen months, between July 1992 and December 1993, Steve and Javier lived and worked beside Colombian authorities, finding themselves in the crosshairs of sicarios targeting them for the \$300,000 bounty Escobar placed on each of their heads. Undeterred, they risked the dangers, relentlessly and ruthlessly separating the drug lord from his resources and allies, and tearing apart his empire, leaving him underground and on the run from enemies on both sides of the law. Manhunters presents Steve and Javier ' s history in law enforcement from their rigorous physical training and their early DEA assignments in Miami
